IO3 Development of two online courses (open educational resources)

For students and trainers

- 1) Holistic approach based working with the UN sustainable development goals including introduction to innovation methods.
- 2) Sector approach (Transport and Logistics – How to be more sustainable? How to be more energetically efficient? How to be more critical with energy consumption? How to implement health perspective). Both courses will have a duration of 2 full days, but will be consisting of short units with the possibility of breaking it into different sessions.

Holistic approach Introducing sustainability for VET

A holistic approach based working with the UN sustainable development goals:

Aim of this course: To provide students and staff with a simple, overall and holistic introduction to the UN sustainable development goals in order to secure common grounds from where to zoom in and focus deeper on specific topics of relevance for the school / class / team.

The target groups of the holistic course are:

1) Students from basic level to more advanced and specialised, depending on the local setting.

(Every partner school decides its respective target groups once the project starts).

2) Managers and teachers at all levels, with basic level teachers being the main focus group, since they meet the students at the beginning of their studies.
